Sorry for the late notice--you are clear to notify with this updated statement:

Today EPA began placing air monitors to measure hydrogen sulfide emissions in Crossett, Arkansas. The project has been closely coordinated with city officials, Georgia-Pacific officials and community leaders in an effort to gather additional scientific information regarding possible hydrogen sulfide emission sources in the area. Georgia-Pacific agreed to allow 11 monitors to be located within their plant boundaries. City and community leaders agreed to the location of an additional nine monitoring locations within the community. A total of 20 air monitors will collect hydrogen sulfide samples. Each sample will be collected over two-week intervals for up to six months. When the project is completed, data results from the samples will be publicly available.

Subject: GP Crossett notifications

David wants to do notifications at 3:30 this afternoon. Does that work for you?
